# **Chapter 1: Proposal (System Conception)**

---

## **1. Introduction:**

The proposed project "HR Management System" has been developed to overcome the problems faced in the practicing of manual system. This software is built to eliminate and in some cases reduce the hardships faced by the existing system. Moreover this system is designed for particular need of the company to carry out its operations in a smooth and effective manner.

It is a special system for employees in any company in which basic jobs are available for any employee, such as (vacations - leaves – edit info - monthly salary ).

## **2. Objective:**

- 1) Useability and efficiency of employees services.
- 2) Generate reports of employee leaves or vacation and complaints.
- 3) To Add the employee salary.

### **3. Problem Statement:**

Overcoming the problems facing the manual system and creating transactions electronically to make it easier for employees and management to communicate between them .

# Chapter 2: Requirements Engineering Part

---

## 1. Stakeholders:

| Actor             | Interests  |
|-------------------|--|
| Managing Director | Salary, Job security,<br>Managing vacation request and reports.  |
| Employees         | Salary, Job security, Vacation request or<br>reports.            |
| Company Owners    | Business operations to run smoothly, Profit.                     |
| IT Developer      | Create the website, Level of security, Privacy,<br>Data Storage. |

## 2. Strengths and Weakness of the System:

The Strength Of Paper System Is : Documentation

The Weaknesses Of Paper System Is :

- 1) Prone to damage: Manual documents can be easily damaged, lost, or stolen.
- 2) Higher costs: Because we will need more paper, printers, copiers, stationery and other office supplies.
- 3) Lack of security: Paper is one of the biggest information security risks for companies because printed documents can easily be lost, mishandled, or destroyed while digital data can be encrypted and kept securely in hard disks or electronic devices.

### **3. Requirement Elicitation:**

Questionnaire.

we can't meet the employee in this time cause of corona virus

For easy access to a larger number of employees and for accurate reports and Asking the employee easily than making and save time also.

# Chapter 3: Software Requirements Specification (SRS)

---

## 1. Functional Requirements: (Admin)

| Functional                        | Description   |
|-----------------------------------|---|
| Login                             | Log in using the administrator number and password  |
| Edit info and Change password     | The Admin can change password and information in employee or your                         |
| Add new employee                  | The Admin can add a new employee  |
| Accept or reject holiday or leave | The Admin can approve or deny a holidays or leave To the employee with the reason written |
| Add the salary                    | The Admin can Add the salary To the employee  |

# 1. Functional Requirements: (Employee)

| Functional                    | Description                                       |
|-------------------------------|---|
| Login                         | Log in using the employee number and password     |
| Edit info and Change password | The password and information change or restore    |
| Request holiday or leave      | Employees are allowed to request holiday or leave |
| view the salary               | Employees are allowed to view the salary amount   |

## **2. Non-Functional Requirements**

### **Usability:**

the system is easy to use by the users, we tried to provide easy control interfaces in the design.

# Chapter 4: Software Architecture

---

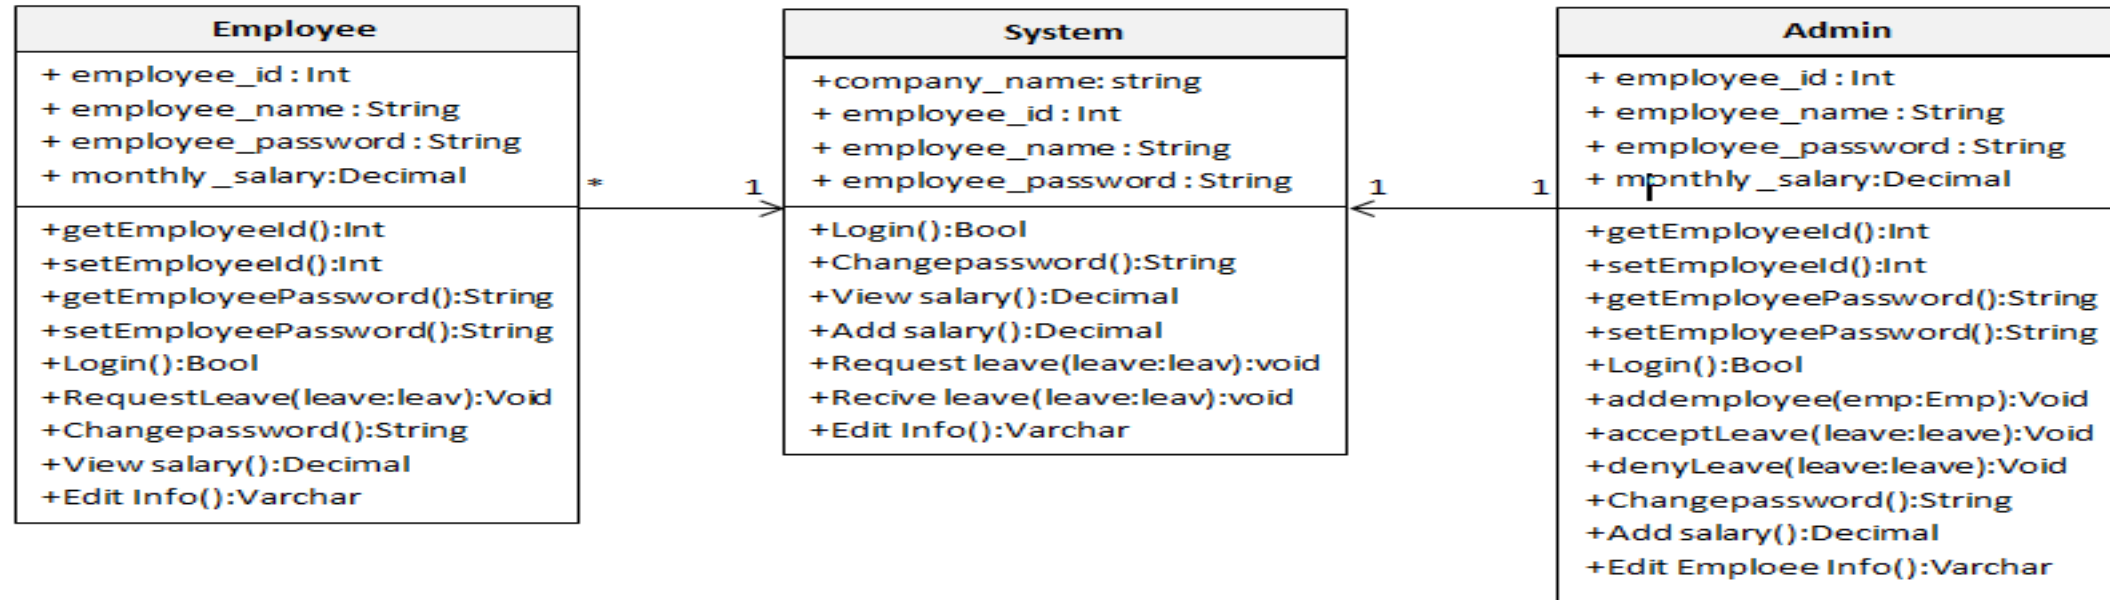

It's a three tier Architecture.

- Three-tier architecture is a well-established software application architecture that organizes applications into three logical and physical computing tiers: the presentation tier, or user interface; the application tier, where data is processed; and the data tier, where the data associated with the application is stored and managed.
- The chief benefit of three-tier architecture is that because each tier runs on its own.

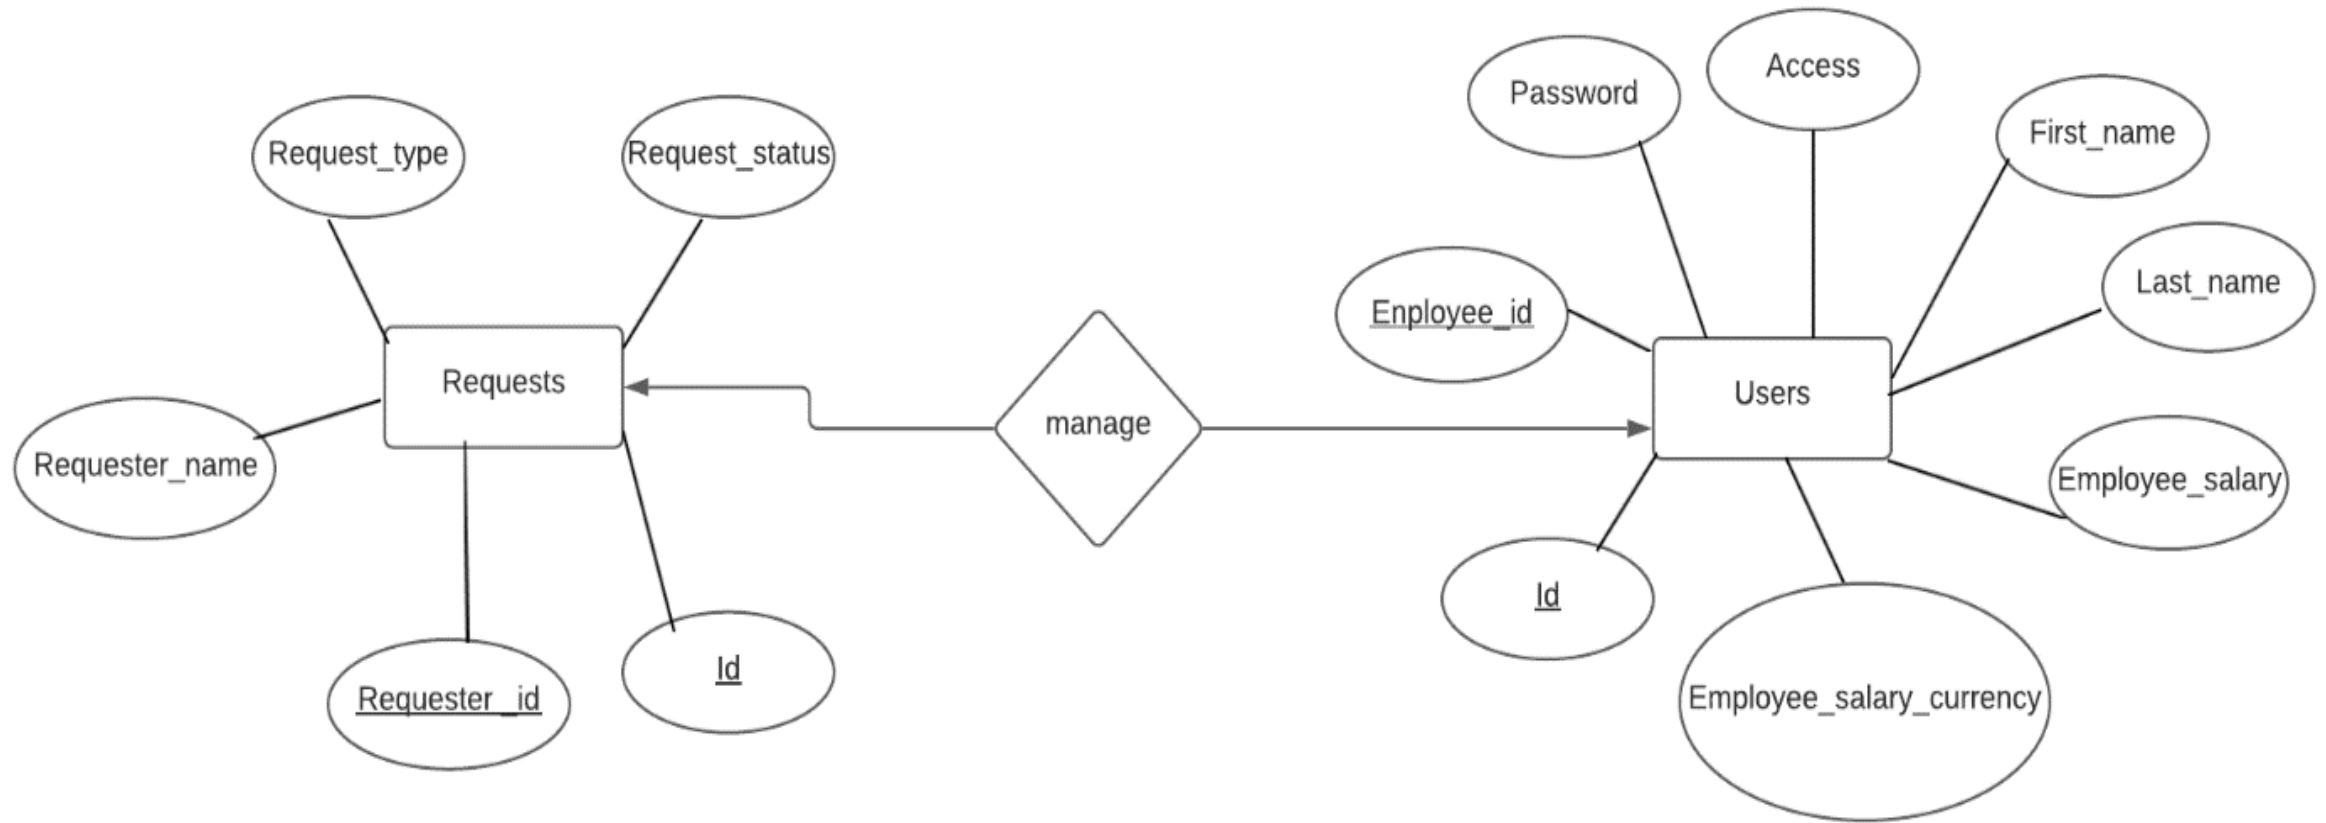

Three-tier application architecture is a modular client-server architecture that consists of a presentation tier, an application tier and a data tier. The data tier stores information, the application tier handles logic and the presentation tier is a graphical user interface (gui) that communicates with the other two tiers. The three tiers are logical, not physical, and may or may not run on the same physical server.

# Chapter 5: Detailed Design

## 1. class diagram...

## 2. Database table...

### 3. User Interface Design...

---

the welcome page of the project its contains about us and contact us and the button of login.

# Chapter 7: Testing

---

## 1. Functional Test Cases:

| Test case number | Test case                 | Actual Input                                | Expected Output                           | Result |
|------------------|---------------------------|---|---|--------|
| 1                | Testing Login             | Employee id : 201710036<br>password : 12345 | Login succeeds and home<br>page presented | pass   |
| 2                | Testing Login             | Employee id : 201720043<br>password : 12335 | Wrong username or<br>password!            | pass   |
| 3                | Testing login by admin    | Employee id : 0<br>password : 12345         | Login succeeds and home<br>page presented | pass   |
| 4                | Testing login by admin    | Employee id : 0213<br>password : 12345      | Wrong username or<br>password!            | pass   |
| 5                | Add new employee by admin | Valid employee data                         | Employee is added                         | pass   |

|           |  |   |                              |             |
|-----------|--|---|------------------------------|-------------|
| <b>6</b>  | <b>Add requests for employee by admin</b>            | <b>Valid request data</b>               | <b>Request is added</b>      | <b>pass</b> |
| <b>7</b>  | <b>Editing employee information by admin</b>         | <b>Pressing submit button</b>           | <b>Employee is editing</b>   | <b>Pass</b> |
| <b>8</b>  | <b>Edit personal employee information</b>            | <b>Pressing submit button</b>           | <b>Employee is editing</b>   | <b>pass</b> |
| <b>9</b>  | <b>Approve a leave or vacation employee by admin</b> | <b>Enter valid Id and name and date</b> | <b>Status leave accepted</b> | <b>Pass</b> |
| <b>10</b> | <b>Deny a leave or vacation of employee by admin</b> | <b>Enter valid Id and name and date</b> | <b>status leave rejected</b> | <b>Pass</b> |
| <b>11</b> | <b>Change password by admin</b>                      | <b>Enter valid new password</b>         | <b>Password is changed</b>   | <b>Pass</b> |
| <b>12</b> | <b>Apply request by admin</b>                        | <b>Enter request type and date</b>      | <b>Request is applied</b>    | <b>pass</b> |

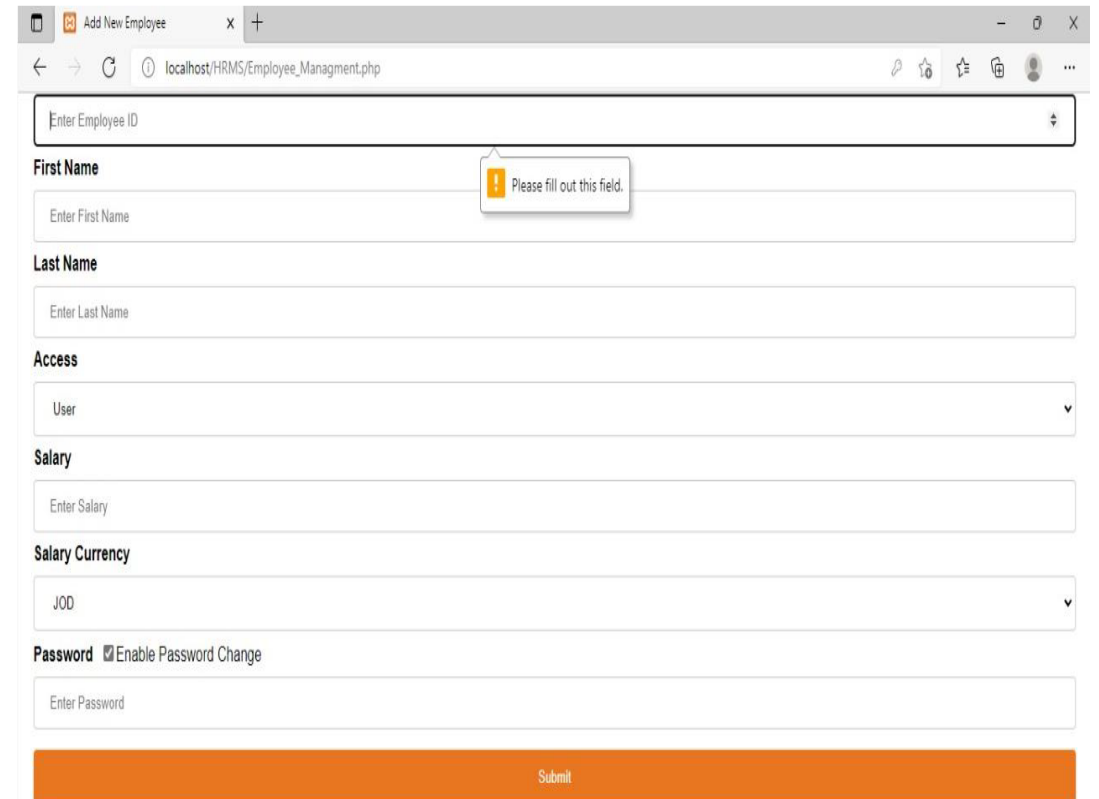

## 2. Sample of Effective Results:

1- log in using invalid employee number and password

2-The form must be filled out

A screenshot of a web browser window showing an 'Add New Employee' form. The browser's address bar displays 'localhost/HRMS/Employee\_Managment.php'. The form includes several input fields: 'Enter Employee ID', 'First Name' (with a tooltip that says 'Please fill out this field.'), 'Last Name', 'Access' (a dropdown menu currently showing 'User'), 'Salary' (with a placeholder 'Enter Salary'), 'Salary Currency' (a dropdown menu currently showing 'JOD'), and 'Password' (with a checkbox for 'Enable Password Change' and a placeholder 'Enter Password'). At the bottom of the form is a large orange 'Submit' button.

# Chapter 8: Conclusion and Future works

---

## Conclusion:

After reviewing the current study and studying it thoroughly ,The Human Resource Management System is an effective system that could be applied and used in many companies . Accordioning to that the system was analyzed and work on establishing a system that manages human resources according to the foundation of any company.

By the website.1) Manager is able to rely on him to manage and control employee data, as well as to manage attendance and absence records.2) Manager also can manage the records of vacations and financial matters for all employees easily.3) By using the website, the administrator can extract reports by employees and all related information.4) Employee can manage his data easily.

# Future work:

- 1) Develop more sections needed by human resources such as performance assessment and vocational training.
- 2) Analysis of the consequences of the system.

Develop the website and improve its performance by studying the conversion to Android and ios application, while the website remains.
